

PACKAGED BAG SYSTEM WITH IDENTIFICATION TAGS

ABSTRACT

The invention includes an assembly including a package
(and a bag system for collecting a biological fluid, in
5 particular blood. The system may be confined in a sterile
fashion in the package. The system may include a fluid
collecting bag and a device for sampling the fluid to be
collected which includes at least one sampling receptacle
associated dissociably with the system. The collecting bag
10 and the sampling receptacle are each provided with an
identification tag which includes information making it
possible, after dissociation of the receptacle from the bag
system, to unequivocally establish that the sampling
receptacle and the collecting bag come from the same bag
15 system.
